DS urbanisation (G2)

1. **Creating the database**

   Using phpMyAdmin : Creation of the DB Employees with one table containing
   - id, name, salary

2. **Making the Rest service :**

   a. **Making the rest service using talend**

We tried to make the rest service using Talend but we kept encountering a problem where the service is on hold in starting mode

Mohamed ben salah, Mohamed Amine Rezgui, Essia Ben Hamida

b. Making the Rest service using nodejs

We have remade the CRUD and asked for Rest endpoints using nodejs and connected it to our database
find it in github

3. Making the RAML API description :

4. Exposing the API with Anypoint
